

## Participate in fMRI Research

Are you age 18 to 30? Do you have convergence insufficiency (difficulty turning the eyes in when looking up close)? If so, you may be eligible to participate in a research study using functional magnetic resonance imaging (fMRI). Functional MRI is a major research tool in developing the science of brain, mind and behavior. We will use this non-invasive method to make pictures of your brain and record brain activity while you are performing eye movements.

You cannot participate in the study if you have other vision problems (that cannot be corrected with glasses or contacts), metal in your body or if you are pregnant.

### **What Will Happen**

Participation is voluntary and involves vision testing to determine if you are eligible (about 1-2 hours) at The OSU College of Optometry (338 W. 10th Ave) and fMRI (about 1.5 hours) at the Center for Cognitive and Behavioral Brain Imaging in the Psychology Building (1435 Neil Ave).

### **Benefits**

Those who are eligible and complete the fMRI will receive a disc with 2 images from the fMRI and \$20.
